

Shager *Wedding* Store Platform

Comprehensive requirements for a wedding service management system — from customer browsing to team delivery.

DOCUMENT	VERSION	PLATFORM	ROLES
SWS-SRS-001	1.0 Draft	Web Application	4 (User / Manager / Team / Admin)

1.1 Project Scope

Shager Wedding Store is a web-based platform that allows customers to browse wedding services, build a service cart (request), and submit a booking request. Managers review and assign those requests to internal team members who execute the services. An administrator oversees the entire system — managing users, services, settings, and platform configuration.

The system covers four interconnected workflows: Customer service discovery & request, Manager request review & assignment, Team member task execution, and Admin platform governance.

i This document uses MoSCoW priority notation: **MUST** = required for launch, **SHOULD** = high priority post-launch, **COULD** = desirable enhancement.

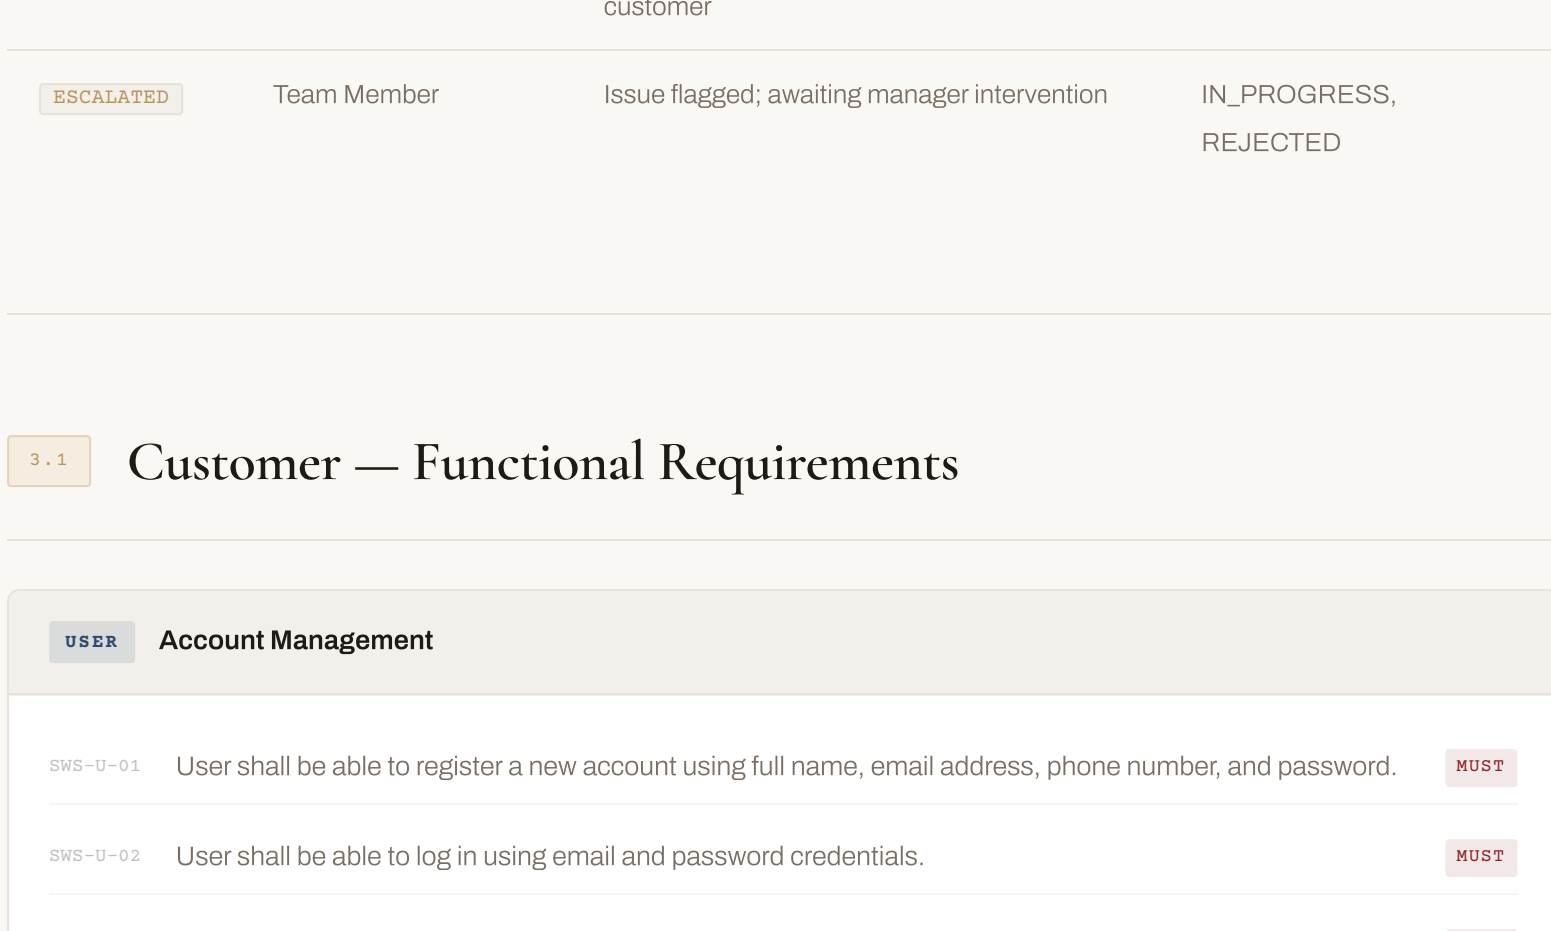

1.2 User Roles & Responsibilities

The system defines four distinct actor types, each with separate access scopes and responsibilities.

 CUSTOMER (USER) Registered individuals planning a wedding. They browse the service catalog, add services to their cart, and submit service requests. They track the status of their bookings through their personal dashboard.	 MANAGER Internal operations staff who review incoming service requests, validate their completeness, assign them to available team members, set deadlines, and monitor overall service delivery progress.
 TEAM MEMBER Service delivery staff (photographers, decorators, caterers, etc.) who receive task assignments from managers, update task progress, upload deliverables, and mark tasks as complete.	 ADMINISTRATOR Platform supervisor with full system access. Creates and manages user accounts, configures service catalog, sets system-wide settings, manages roles, permissions, and monitors overall platform health.

2.0 Service Request Flow

The core lifecycle of a wedding service request — from customer discovery to completed delivery.

REQUEST STATUS STATES

STATUS	SET BY	MEANING	NEXT STATE
PENDING	System (on submit)	Request received, awaiting manager review	REVIEWED, REJECTED
REVIEWED	Manager	Manager has opened and assessed the request	ASSIGNED, REJECTED
ASSIGNED	Manager	One or more team members have been assigned	IN_PROGRESS
IN_PROGRESS	Team Member	Active work is underway on the service	COMPLETED, ESCALATED
COMPLETED	Team Member / Manager	All services in the request have been delivered	— (terminal)
REJECTED	Manager	Request declined with reason provided to customer	— (terminal)
ESCALATED	Team Member	Issue flagged; awaiting manager intervention	IN_PROGRESS, REJECTED

3.1 Customer — Functional Requirements

USER	Account Management
SRD-C-01	User shall be able to register a new account using full name, email address, phone number, and password. MUST
SRD-C-02	User shall be able to log in using email and password credentials. MUST
SRD-C-03	User shall be able to reset their password via a secure email link. MUST
SRD-C-04	User shall be able to update their profile information including contact details, wedding date, and venue. SHOULD
SRD-C-05	User shall receive an email verification link upon registration before account activation. MUST
USER	Service Catalog Browsing
SRD-C-06	User shall be able to browse all available wedding services organized by category (e.g. Photography, Catering, Decoration, Music, Venue, Makeup). MUST
SRD-C-07	User shall be able to view a detailed page for each service showing name, description, price range, photos, and availability. MUST
SRD-C-08	User shall be able to filter services by category, price range, and date availability. MUST
SRD-C-09	User shall be able to search services by keyword. SHOULD
SRD-C-10	User shall be able to view service ratings and reviews left by previous customers. COULD
USER	Service Cart
SRD-C-11	User shall be able to add one or more wedding services to a personal service cart. MUST
SRD-C-12	User shall be able to view all items currently in their cart with individual service details and a cost summary. MUST
SRD-C-13	User shall be able to remove individual services from their cart. MUST
SRD-C-14	User shall be able to specify service-level customization notes (e.g. theme color, dietary preference) when adding to cart. SHOULD
SRD-C-15	Cart contents shall persist across sessions (not be lost on logout). MUST
SRD-C-16	User shall be able to set the target wedding event date during checkout from the cart. MUST
USER	Service Request Submission
SRD-C-17	User shall be able to convert their cart into a formal service request by submitting it with event date, venue, and optional message to the manager. MUST
SRD-C-18	Upon submission, user shall receive a confirmation notification (on-screen and email) with a unique request reference number. MUST
SRD-C-19	User shall be able to view all past and current service requests from their personal dashboard. MUST
SRD-C-20	User shall receive real-time status update notifications when their request status changes (e.g. Assigned, In Progress, Completed). SHOULD
SRD-C-21	User shall be able to cancel a service request that is still in PENDING or REVIEWED status. SHOULD

3.2 Manager — Functional Requirements

MANAGER	Request Inbox & Review
SRD-M-01	Manager shall have a dedicated inbox displaying all incoming service requests, ordered by submission date and urgency (event date proximity). MUST
SRD-M-02	Manager shall be able to open and view full details of any service request including customer profile, services requested, event date, venue, and customization notes. MUST
SRD-M-03	Manager shall be notified immediately (in-app and email) when a new service request is submitted. MUST
SRD-M-04	Manager shall be able to filter requests by status, event date, service category, and assigned team member. MUST
SRD-M-05	Manager shall be able to add internal notes to a request (not visible to the customer). SHOULD
MANAGER	Team Assignment
SRD-M-06	Manager shall be able to assign a service request (or individual services within it) to one or more team members. MUST
SRD-M-07	Manager shall be able to view team members' current workload and availability before making assignments. MUST
SRD-M-08	Manager shall be able to set a due date/deadline for each assigned task. MUST
SRD-M-09	Assigned team member(s) shall receive an in-app and email notification upon assignment. MUST
SRD-M-10	Manager shall be able to re-assign a task to a different team member if needed. SHOULD
SRD-M-11	Manager shall be able to reject a service request with a mandatory reason, which is communicated to the customer. MUST
MANAGER	Progress Monitoring
SRD-M-12	Manager shall have a dashboard showing all active requests with their current statuses and assigned team members. MUST
SRD-M-13	Manager shall be able to view the full activity log of each request (who changed what and when). SHOULD
SRD-M-14	Manager shall be alerted when a task deadline is within 48 hours and not yet completed. SHOULD
SRD-M-15	Manager shall be able to mark a request as COMPLETED after verifying all services have been delivered. MUST

3.3 Team Member — Functional Requirements

TEAM	Task Management
SRD-T-01	Team member shall be able to log in and see only the tasks/requests assigned to them. MUST
SRD-T-02	Team member shall be able to view full details of each assigned service task including customer notes, event date, venue, and deadline. MUST
SRD-T-03	Team member shall be able to update the status of their task (Accept → In Progress → Completed). MUST
SRD-T-04	Team member shall be able to add progress notes/comments to a task (visible to manager only). SHOULD
SRD-T-05	Team member shall be able to upload deliverable files (photos, documents) to a completed task. SHOULD
SRD-T-06	Team member shall be able to escalate a task to the manager with a description of the issue. MUST
SRD-T-07	Team member's dashboard shall display tasks sorted by deadline urgency and grouped by status. MUST

3.4 Admin — Functional Requirements

ADMIN	User Management
SRD-A-01	Admin shall be able to create new user accounts for any role (Customer, Manager, Team Member, Admin). MUST
SRD-A-02	Admin shall be able to view a full list of all registered users, filterable by role and account status. MUST
SRD-A-03	Admin shall be able to edit any user's profile information and role assignment. MUST
SRD-A-04	Admin shall be able to deactivate or permanently delete a user account. MUST
SRD-A-05	Admin shall be able to reset the password for any user account. MUST
SRD-A-06	Admin shall be able to view a user's activity log and all associated service requests. SHOULD
ADMIN	Service Catalog Management
SRD-A-07	Admin shall be able to create new wedding services with name, category, description, price range, and photos. MUST
SRD-A-08	Admin shall be able to edit or archive existing services. MUST
SRD-A-09	Admin shall be able to create and manage service categories. MUST
SRD-A-10	Admin shall be able to toggle service availability (active / inactive). MUST
ADMIN	Reporting & Oversight
SRD-A-11	Admin shall have access to an analytics dashboard showing total requests, completion rates, revenue (estimate), and team performance metrics. SHOULD
SRD-A-12	Admin shall be able to view and export all service requests in CSV or PDF format. SHOULD
SRD-A-13	Admin shall be able to view a full system audit log showing all significant actions with timestamps and actors. COULD

3.5 System Settings (Admin)

SYSTEM	Platform Configuration
SRD-S-01	Admin shall be able to configure business information: store name, logo, contact email, phone, and physical address. MUST
SRD-S-02	Admin shall be able to configure notification settings: which events trigger email/in-app notifications and to which roles. MUST
SRD-S-03	Admin shall be able to define working hours and blackout dates (holidays) that affect service availability. SHOULD
SRD-S-04	Admin shall be able to configure role-based permissions, pricing which features each role can access. MUST
SRD-S-05	Admin shall be able to set the default currency and regional display format. SHOULD
SRD-S-06	Admin shall be able to enable or disable customer self-registration (vs. admin-only account creation). MUST
SRD-S-07	Admin shall be able to configure email SMTP settings for outgoing notifications. MUST
SRD-S-08	Admin shall be able to configure maximum number of services allowed in a single service request cart. COULD

4.0 Core Data Models

Key entities and their primary attributes required to support the system.

ENTITY	KEY ATTRIBUTES	RELATIONSHIPS
User	id, name, email, phone, role, status, created_at	Has many ServiceRequests (as customer); Has many Assignments (as team member)
Service	id, name, category_id, description, price_min, price_max, images, is_active	Belongs to Category; Has many CartItems
ServiceCategory	id, name, icon, sort_order	Has many Services
Cart	id, user_id, created_at, updated_at	Belongs to User; Has many CartItems
CartItem	id, cart_id, service_id, custom_notes	Belongs to Cart; Belongs to Service
ServiceRequest	id, reference_no, user_id, event_date, venue, status, customer_message, submitted_at	Belongs to User; Has many RequestItems; Has many Assignments
RequestItem	id, request_id, service_id, custom_notes, status	Belongs to ServiceRequest; Belongs to Service
Assignment	id, request_id, request_item_id, team_member_id, assigned_by, deadline, status, manager_notes	Belongs to ServiceRequest; Belongs to User (team member); Belongs to User (manager)
Notification	id, user_id, type, message, is_read, created_at	Belongs to User
AuditLog	id, actor_id, action, entity_type, entity_id, timestamp	Belongs to User (actor)

4.1 Non-Functional Requirements

PERFORMANCE Speed & Responsiveness — Page load time under 3 seconds on standard broadband — Service catalog search results returned in under 1 second — Support minimum 200 concurrent users without degradation	SECURITY Data & Access Protection — All passwords stored as bcrypt hashes (min cost factor 12) — All HTTP traffic enforced over HTTPS/TLS — Role-based access control enforced server-side on every endpoint — Session tokens expire after 24 hours of inactivity
USABILITY User Experience — Fully responsive — usable on mobile, tablet, and desktop — Key workflows completable in fewer than 5 steps — All form errors displayed inline with descriptive messages	RELIABILITY Availability & Uptime — Target system uptime of 99.5% per month — Automated daily database backups retained for 30 days — Graceful error pages for all unhandled exceptions
SCALABILITY Growth Readiness — Architecture must support adding new service categories without code changes — Role and permission system must support additional roles in future — Media storage should use a CDN-compatible architecture	MAINTAINABILITY Code & Operations — All configuration externalized (no hardcoded secrets in codebases) — Application and error logs written to structured, searchable format — Admin must be able to perform setting changes without a deployment

4.2 Glossary

TERM	DEFINITION
Service Cart	A temporary collection of wedding services a customer has selected before formally submitting a request. Analogous to a shopping cart in e-commerce.
Service Request	A formalized submission created from a customer's cart, representing their intent to book specific wedding services for a given event date.
Assignment	The linkage between a service request (or individual service within it) and a team member, created by a manager.
Request Reference No.	A system-generated unique identifier for each service request, used for tracking and communication.
Escalation	A flag raised by a team member indicating they cannot proceed without manager intervention (e.g. missing information, resource conflict).
Service Category	A grouping for services (e.g. Photography, Catering, Decoration). Managed by the admin and used for catalog navigation.
MoSCoW	Requirements prioritization method: Must Have, Should Have, Could Have, Won't Have (this time).
Audit Log	An immutable, append-only record of all significant actions taken on the platform, used for traceability and compliance.
